DETAILED ACTION

1. This action is responsive to communications: Amendment, filed on 8/16/2005.
This action is non-final.
2. Claims 1-16 are pending in this application. Claim 1 is independent claim. In the Amendment, filed on 8/16/2005, claims 10, 11 and 13 were amended.
3. The present title of the invention is "White space algorithm to support the creation of high quality computer-based drawing free of graphics and text overwrites" as filed originally.

Specification

4. 35 U.S.C. 112, first paragraph, requires the specification to be written in "full, clear, concise, and exact terms." The specification is replete with terms which are not clear, concise and exact. The specification should be revised carefully in order to comply with 35 U.S.C. 112, first paragraph. Examples of some unclear, inexact or verbose terms used in the specification are:

This feature is enabled be setting ... (page 6, line 15);

A qualified human draughtsman ... (page 6, line 28);

Fizzy logic ... (page 7, line 1);

Quality of white spaced ... (page 7, line 2).

Claim Rejections - 35 USC § 112

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential steps, such omission amounting to a gap between the steps. See MPEP § 2172.01. The omitted steps are:

The algorithm provides status variables that define the quality of white space(d) found and these are used by client applications to adjust preferred coordinates (page 7, line 1-3 of specification).

In claim 1, the steps of determining the quality of white space and the step of adjusting are not structurally related, which leaves the claim un-enabling.

7. Claim 1 recites the limitation "moving proposed new graphics into locations of white space" in line 12-13. There is insufficient antecedent basis for this limitation in the claim. This step is not disclosed in the specification.

8. Claim 1 recites the limitations "the quality of white space" in line 9. There is insufficient antecedent basis for this limitation in the claim.

9. Claim 3 recites the limitation "the white space algorithm" in line 3. There is insufficient antecedent basis for this limitation in the claim.

10. Claim 8 recites the limitation "the white space algorithm" in line 1-2. There is insufficient antecedent basis for this limitation in the claim.

11. Claim 8 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite in that it fails to point out what is included or excluded by the claim language. This claim is an omnibus type claim.

Examiner is not able to determine the scope of this claim limitation – “a plethora of different client applications from virtually any discipline”.

12. Claims 11 and 12 are rejected as failing to define the invention in the manner required by 35 U.S.C. 112, second paragraph.

The claim(s) are narrative in form and replete with indefinite and functional or operational language. The structure which goes to make up the device must be clearly and positively specified. The structure must be organized and correlated in such a manner as to present a complete operative device. **The claim(s) must be in one sentence form only.** Note the format of the claims in the patent(s) cited.

13. All the dependent claims are also rejected because of the rejected claim 1.

Response to Arguments

14. Applicant's arguments, see amendment, filed 8/16/2005, with respect to the rejection(s) of claim(s) 1-8 and 10-16 under Fall et al. have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of **35 USC § 112**.

Conclusion

15. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
